

Perimeter Edging Strip

The Product

John C Wilkins Perimeter Edging Strip isolates the flooring from the walls in such a way that transmission of flanking sound and impact noise is dramatically reduced. Unlike other perimeter edging strips (also known as flanking bands), John C Wilkins Edging Strips are not pre-formed. And with 80mm of the edging strip sticking up above the skirting board while it is installed, the job is much more manageable than working with a pre-formed strip where only 20mm is visible.

The Facts

- Not pre-formed and therefore easier to handle
- Very quick and easy to install and can be used with acoustic battens, cradles and decking
- Suitable for commercial and residential applications
- Suitable for new, renovation or retrofit applications
- Highly cost-effective

Specification

- **Thickness: 5mm**
- **Width: 150mm**
- **Length: 50m**

Installation

The John C Wilkins Perimeter Edging Strip is secured between the skirting board and the flooring, then trimmed with a sharp blade.

For expert installation, we offer our own installation service anywhere in the UK. Your installation will be performed to the highest standards by skilled and experienced tradesmen. These experts understand the importance of fitting acoustic materials absolutely perfectly and they have the specialist skills to ensure your John C Wilkins materials are fitted correctly every time. As they are both experienced and skilled, they are also able to provide a highly efficient and extremely cost-effective service.
