## INSTALLATION GUIDE

# JCW SILENT BOARD ACOUSTIC WALL SYSTEM

### TOOLS/ACCESSORIES REQUIRED

- Sharp trimming knife
- Handsaw
- Screw fixings and plugs
- Acoustic Sealant

### INSTALLATION NOTES

1. All skirting and coving is to be removed.
2. Make sure the wall is clean and that all dust is wiped away.
3. The installation can commence starting in the bottom left or bottom right corner, the choice is yours. Offer your first panel to the wall making sure it sits square leaving a 5mm gap around the perimeter edge of the wall. Once the first board is in position apply the second layer of Silent Board butting up tightly to the previous board and continue.
4. The Silent Board can be installed to the wall using drywall screws and plugs dependent upon the wall being level and that there is a solid fix for the screws and plugs to connect to resulting in the boards being safe structurally.
5. The Silent Board is then mechanically fixed using 42-45mm drywall screws if necessary raw plug first. We recommend the use of nine screws per board evenly spread top, middle and bottom.
6. Work along the bottom row in the same manner as above, trimming any panels as needed.
7. Start the second row from where the first ended to give the sheets a staggered joint. Again follow the same procedure until the wall is completed. Getting the first panel flush and square will make the rest of the installation easier. Cut and trim any further panels as needed.
8. The 5mm gap around the perimeter of the whole wall is then filled with JCW Acoustic Sealant ensuring maximum performance with the JCW Silent Board.
9. The acoustic wall system is then ready for a plaster skim finish or use of a heavy duty backing paper.

\* We do not accept any responsibility for the structural weight acceptance of any building and whether it can withstand the weight of any products or combination of products. If you are concerned we feel you may benefit from the advice of a professional at your own cost. Refunds will not be given under these circumstances.
