

Thermo Sound

The Product

Thermo Sound acoustic infill sections are designed to fit today's perforated roof profiles and provide effective thermal and acoustic insulation.

Typical uses include large scale industrial, commercial and retail premises. The Thermo Sound sections have a trapezoidal profile designed to fit perforated metal roof lining panels and are supplied to meet the system specifications supplied by the roof manufacturer. The density of the Rockfibre insulation is also supplied according to these specifications.

The Rockfibre can be supplied with a plain finish, or faced in either black or white tissue which can be left to show through the lining panel perforations to create a design feature.

Thermo Sound sections are supplied in 1200mm lengths.

Installation

For expert installation, we offer our own installation service anywhere in the UK. Your installation will be performed to the highest standards by skilled and experienced tradesmen. These experts understand the importance of fitting acoustic materials absolutely perfectly and they have the specialist skills to ensure your John C Wilkins materials are fitted correctly every time. As they are both experienced and skilled, they are also able to provide a highly efficient and extremely cost-effective service.
