

Large Portable Acoustic Panels

JCW Acoustic Supplies are specialists in manufacture of bespoke and tailor made sound absorption products. Whatever the sound issue we are confident we can manufacture/source a product to improve the sound quality of your room.

The latest example of this is the 2.4m tall portable acoustic panels designed to the needs of our customer who are using it within a recording studio.

These panels have been manufactured bespoke to our customers' specification with the goal improving the sound quality and acoustic performance of a film recording studio. We were tasked with creating four extremely tall 2.4 m panels (1 x 2.4m x 1.2 3 x 2.4m x 0.92m) to reduce echo and reverberation.

The 7 foot 8 acoustic panels are wrapped in sound absorbent Cara Fabric in the clients preferred colour of 'Lomond', this colour best suited the décor of the studio.

The panels are to be used in a TV Production company Warehouse 51 who are based in Bristol, there aim is to produce the highest quality Factual and Factual Entertainment programming.

These acoustic panels come with disc feet so that they can be moved with ease in and around the production set. Considering the enormous panel size, they are also surprisingly lightweight and can be lifted and moved by one person.
