

# CASE STUDY

## Kendray Hospital, Doncaster Road, Barnsley

**Client:** *Interserve*

**Product installed:** *90m<sup>2</sup> Reflecta Sound panels*

JCW Acoustic Supplies installed 90m<sup>2</sup> of Reflecta sound panels to the walls of both the male and female wards. In total 6 different variations of colour were used in panels throughout the wards. This added variation to the walls and matched differing themes throughout the hospital.

The hospital contacted JCW stating their issue of patient discomfort due to noise in the wards. After conducting an in depth fact finding exercise we established that our Reflecta sound panels would be the ideal solution to this problem. The Reflecta panels are decorative wall panels that absorb high levels of reflected noise and create a quieter, more comfortable environment.

The installation took our 2-man team around 4 days to complete.

A hallway fitted with JCW Reflecta Sound panels

Throughout the hospital we used 6 different coloured panels to match each ward theme. This is an example of how our panels can be tailor made to your needs.
