

CASE STUDY

Walney School, Gap Lane, Barrow in Furness

Client: Eric Wright Construction

Product installed: Over 570m² of Absorbent panels

JCW Acoustic Supplies installed 437 sound absorbing panels throughout the school's classrooms, corridors and common areas.

The school was experiencing problems with noise echo and reverberation and after visiting the site we realised that our absorbent wall panels would be the perfect solution to this problem because of their excellent absorption performance. The panels reduced both noise and reverberation throughout the school meaning it was a far more pleasant learning environment.

The installation took our 3-man team around 2 weeks to complete.

A hallway fitted with acoustic sound absorption panels

The panels can be bespoke to your order and tailored to your décor
