

CASE STUDY

St Thomas Place, Stockport

Product Supplied: JCW Deck 37C

JCW Acoustic Supplies supplied 1475m² of Deck 37C to be installed direct to timber I joist over 3 no. upper floors.

The client wanted a solution to their acoustic requirement for the project that would save time on fitting that would be spent using an acoustic batten system, so JCW were called upon by Joseph Parr Builders Merchant to help their customer come up with a solution. After visits to site and a look over the desired acoustic ratings to be achieved, JCW Deck 37C direct to joist was seen to be the way forward with this method and product saving on time, labour, having to use a subfloor and having to lay a further secondary floor too.

The product was delivered direct to site in three phases with all the handling of all the logistics done by JCW.
