

CASE STUDY

Trevibban Mill, Vineyard and Orchards, Cornwall

Product Supplied: Deck 33

Product supplied via Jewson Wadebridge

Trevibban Mill Vineyard and Orchards, located near Padstow, Cornwall, opened in May 2015.

The owners Liz and Engin Mumcuoglu met with our Regional Sales Manager Claire Shawyer to discuss their project in Summer 2017 after deciding to convert the space above the restaurant into a function room that might be hired out in addition to, or privately, from the main restaurant area underneath.

The 1st floor area had a balcony running around its perimeter and floor to ceiling doors/ windows looking out over the vineyard.

The problem this posed was not so much one of airborne performance, as it was understood by the client that when the windows and doors were opened there would be little that could be done to prevent the music noise escaping.

The biggest issue was the central dancefloor and impact noise filtering down to private diners in the restaurant area.

The customer was keen to ensure that he put the best possible product in place to reduce impact whilst keeping a close eye on cost due to the addition of soundproofing being an unforeseen addition to the project.

JCW Deck 33 was the obvious choice and was installed throughout the entire 1st floor level.

The proof in the performance is always in the dancing though! After the project was fully finished and the first function had been held at Trevibban Mill, we ventured to ask Engin what his thoughts were on the performance of the product in this particular usage.

“Quote from Engin saying its bloomin awesome”...
